BRAINLY

CONSOLIDATED REPORT

THE YEAR 2025

BRAINLYHQ

INTRODUCTORY REMARKS

The year 2025 was a special and fundamental year for the BrainlyHQ server – it was in March that it was officially launched and began operating. From that moment on, the server entered a phase of intensive development, structuring and conscious building of the quality of community activities. The consolidated report for the past year provides a concise and reliable summary of BrainlyHQ's first period of operation.

The purpose of this report is not only to present numerical results, but also to show the direction in which the server has been consistently moving since its inauguration. The document integrates information on user activity, the work of administrative and moderation teams, initiatives implemented, technical stability and organisational changes, creating a coherent picture of BrainlyHQ's activities from March to the end of 2025.

The conclusions presented in the report are the result of the joint work of the entire community – users and the team responsible for organising and supervising the server. It was during the first, founding year of operation that the foundations of BrainlyHQ were laid, setting the direction for its further development.

BRANDS / PRODUCTS

BRAIN+

Brain+ is a bot responsible for the task system and collecting BrainlyCoins on the BrainlyHQ server. It was created by developer Wellington and is the technological showcase of the server. Its operation supports user activity and organises gamification mechanisms.

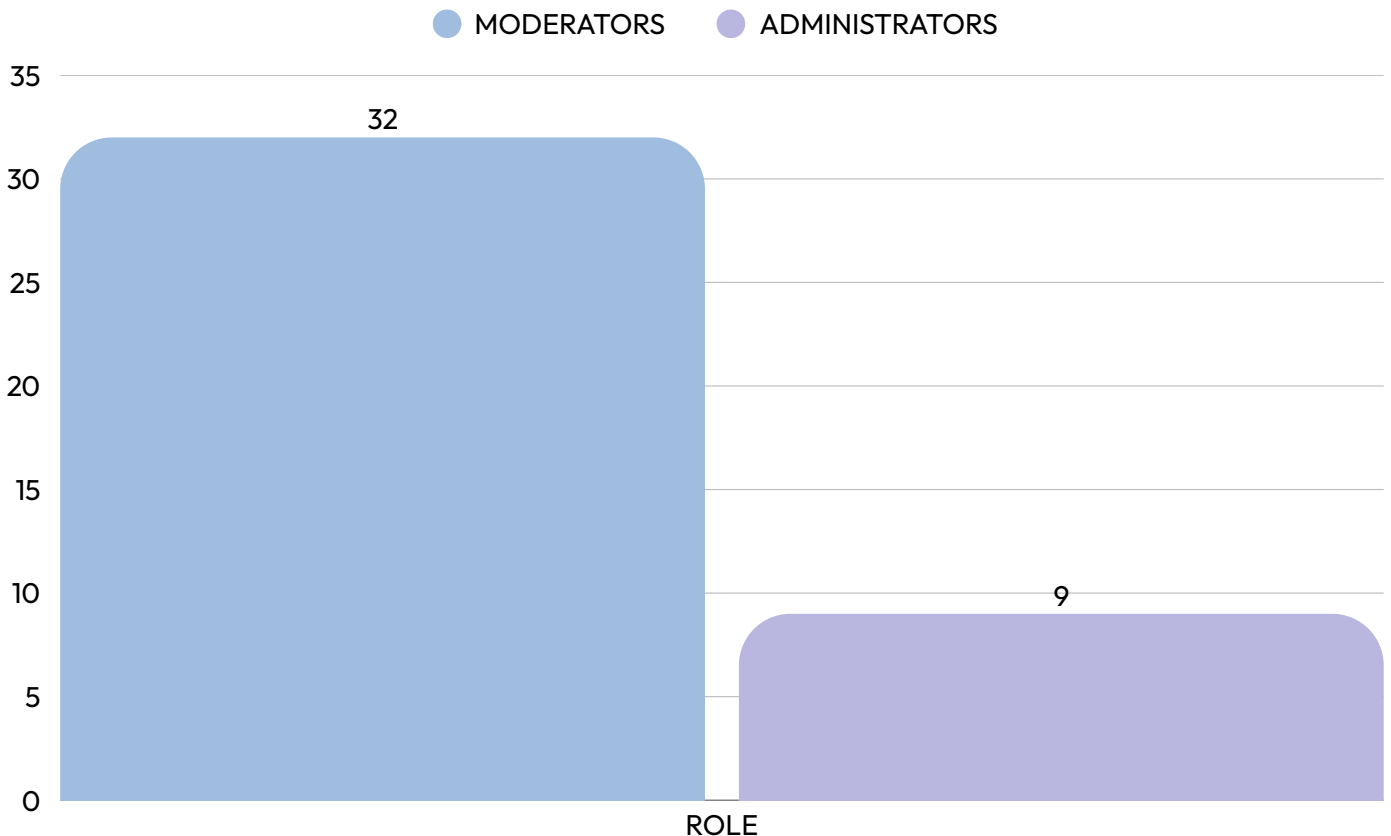

BRAIN+ BETA

Brain+ Beta is a test version of the Brain+ bot, used to implement and verify new features before they are released in the production environment. It allows for safe testing of changes to the task system and BrainlyCoins without affecting the main operation of the server.

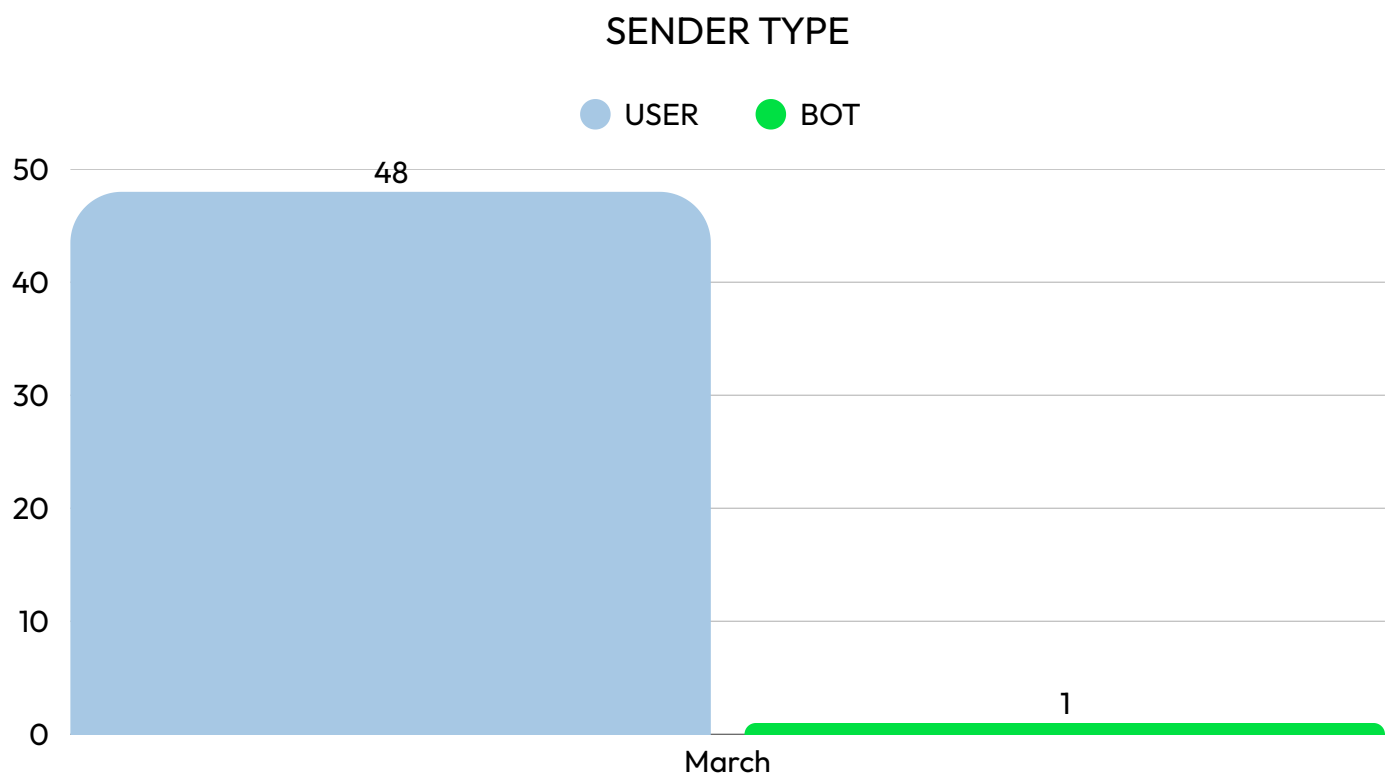

The year 2026 promises to be a period of **further changes and expansion of the BrainlyHQ ecosystem**. We plan to introduce new products, develop existing systems, and implement further technological and organisational improvements. The upcoming activities are aimed at strengthening the server's functionality and further improving the user experience.

MODERATORS & ADMINS

In 2025, the BrainlyHQ team consisted of 32 moderators, among whom ! †*Azura* <3. The role of 9 administrators was performed by people responsible for strategic decisions and server supervision, with beyaz and Kinga being the most active. Developer Wellington was responsible for technical development, while Theo ensured hosting and server stability. In the coming year 2026, Ksperix will begin work on restructuring and team support, introducing further organisational improvements.

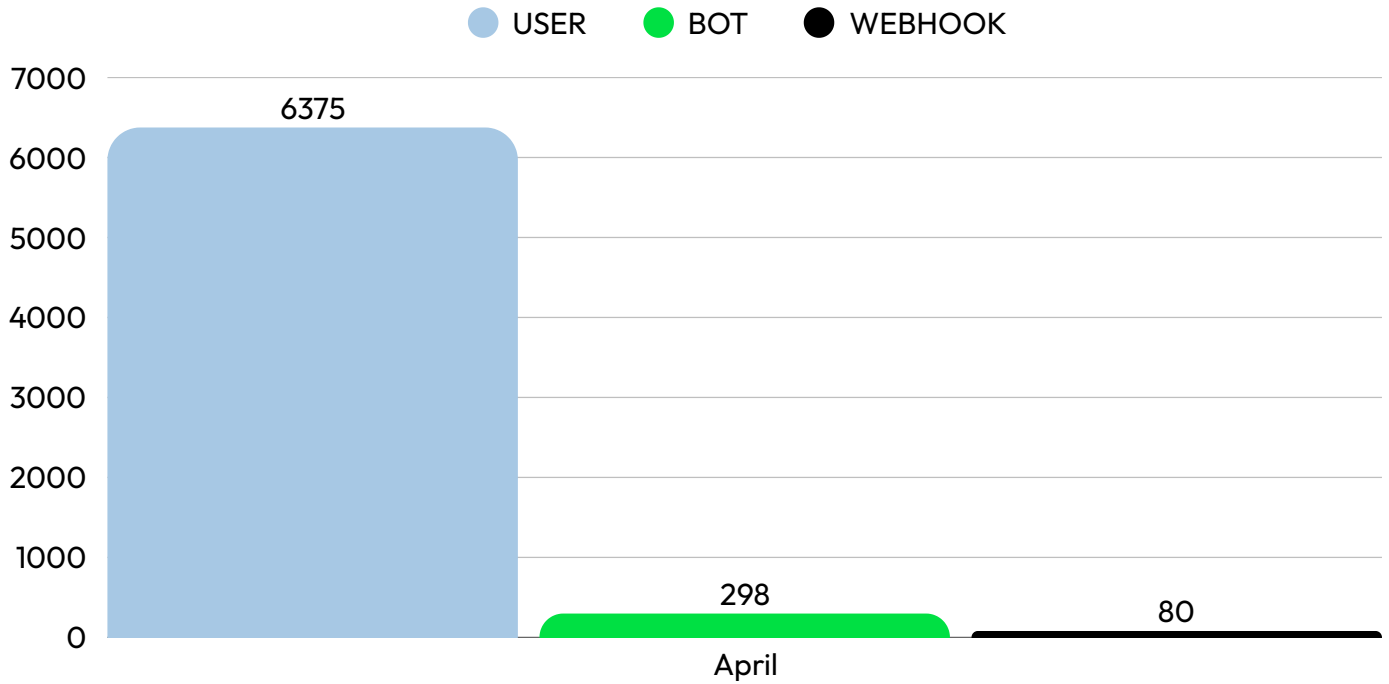

MARCH REPORT

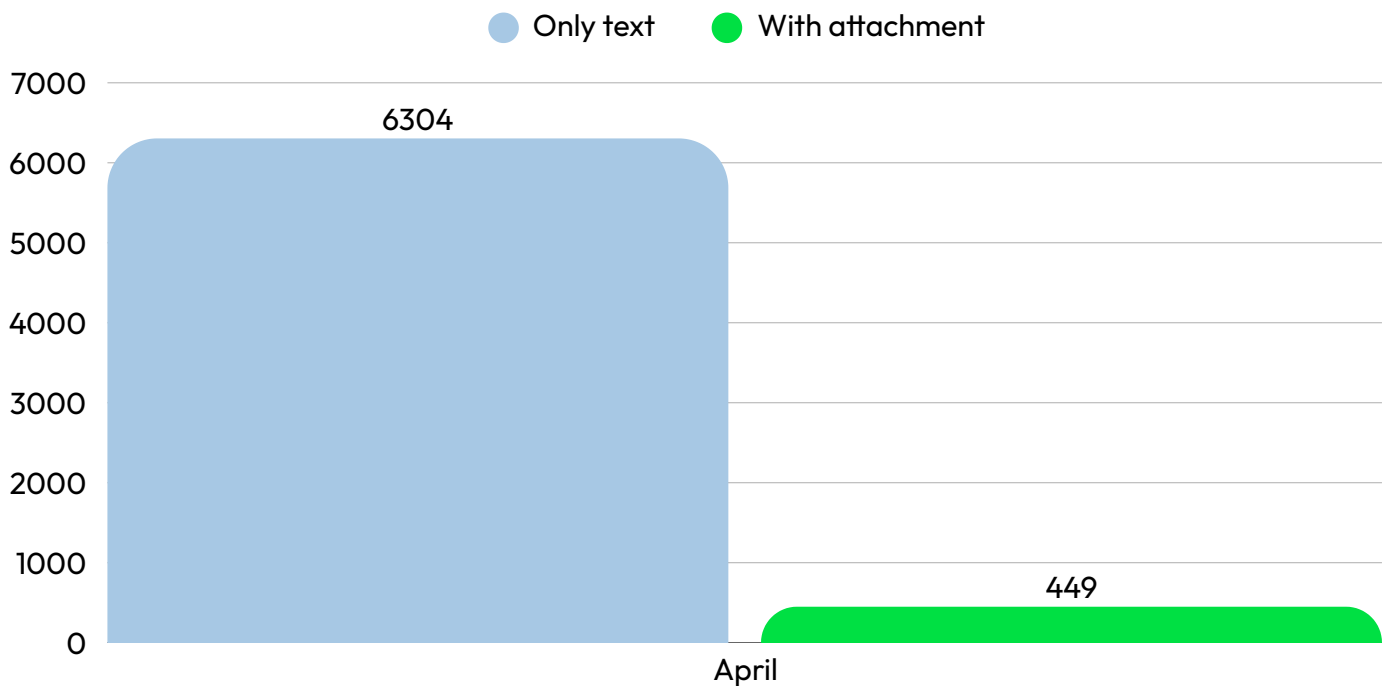

March 2025 saw the launch of the BrainlyHQ server and intensive work on its structure, technical configuration and organisational foundations. Due to the stage of development and implementation of key operational solutions, including system integration, no webhooks were launched this month, which directly translated into low values of the presented quantitative indicators. The March data should therefore be treated solely as an initial reference point; a detailed discussion of their structure, breakdowns and dynamics of change in subsequent months is presented in the following pages of the report.

OVERALL REPORT II

The period from March to December 2025 covers the first full stage of operation of the BrainlyHQ server, which was created on 19 March 2025. The server is owned by the user brainlymods. The initial months were devoted to implementation, while the following months brought gradual stabilisation of activity and an increase in the number of users, which exceeded 800 by the end of the year.

During the analysed period, an average of 6,172.4 messages per month were sent on the server, for a total of 61,724 messages. The structure of senders remained relatively constant: on average, 3,250.3 messages per month came from users, 1,957.6 from bots, and 964.5 were generated by webhooks. These data indicate the important role of automation and system integration, while maintaining a high share of end-user activity.

Multimedia content was also an important element of communication — on average, 683.7 messages per month contained attachments, confirming the practical and working use of the server. A summary of data from the entire period shows that since its launch, BrainlyHQ has moved from the initial phase to a stable community with clearly defined activity patterns. Detailed analyses of dynamics, monthly breakdowns and activity categories are presented later in the report.

Thank you all for taking the time to read the BrainlyHQ report for 2025. Last year was the first year of operation for the server, and thanks to the commitment of the entire community, it was possible to achieve stability, build an active user group, and implement key products such as Brain+ and Brain+ Beta.

In the coming year, 2026, reports will be prepared on a monthly basis, which will allow for even more accurate tracking of activity, verification of new features, and evaluation of the effects of the changes introduced. Each report will document in detail the status of the server, user behaviour, the activities of the administration and moderation team, as well as technological development and the introduction of new products.

Regular reporting is intended not only to ensure transparency of activities, but also to provide the community with tools to better understand how the server works and to plan future initiatives.
