BRAINLY

CONSOLIDATED REPORT

FEBRUARY 2026

BRAINLYHQ

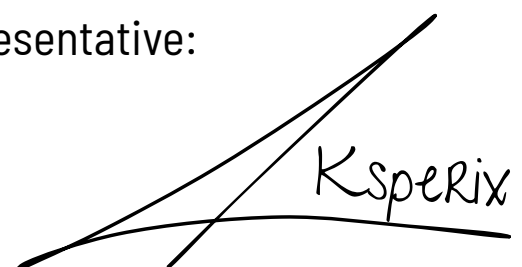

INTRODUCTORY REMARKS

This document opens another monthly summary of activities carried out within Brainly HQ – a space that, over time, has become more than just a Discord server. It is a constantly evolving ecosystem, connecting the community, the moderation team and side projects, whose common goal is to develop and organise initiatives around Brainly.

February 2026 was a month of significant operational and organisational changes. New people joined the moderation team, some moderators ended their cooperation, and many internal processes were streamlined. After a break of about a month, the Brain+ bot also resumed operation, which significantly affected the functioning of the server. At the same time, work began on the Brainly Lab project – a platform with mini-games, which is currently being developed by a team of 16 people.

All these changes add up to a clear success in recent months. Brainly HQ is consistently growing, attracting new users and building an increasingly engaged community, confirming that we are on the right track. This report not only summarises the actions taken, but also shows the scale of development and potential for the coming months.

Signature of BrainlyHQ Management Board Representative:

A handwritten signature in black ink, consisting of a stylized, sweeping line that forms the letters 'Ksperix'.

BRANDS / PRODUCTS

BRAIN+

Brain+ is a bot responsible for the task system and collecting BrainlyCoins on the BrainlyHQ server. It was created by developer Wellington and is the technological showcase of the server. Its operation supports user activity and organises gamification mechanisms.

BRAIN+ BETA

Brain+ Beta is a test version of the Brain+ bot, used to implement and verify new features before they are released in the production environment. It allows for safe testing of changes to the task system and BrainlyCoins without affecting the main operation of the server.

BRAINLY LAB

BrainlyLab is a platform for games and mini-games that allows users to personalise their profiles and earn BrainlyCoins. The project has educational value and is currently under development.

CHANGES IN SERVER

Reorganized the role hierarchy for better clarity.

Restructured channel and role categories to improve navigation.

Updated the server rules to match current needs.

Defined and system-supported moderation permissions.

Organized tickets and archived old channels.

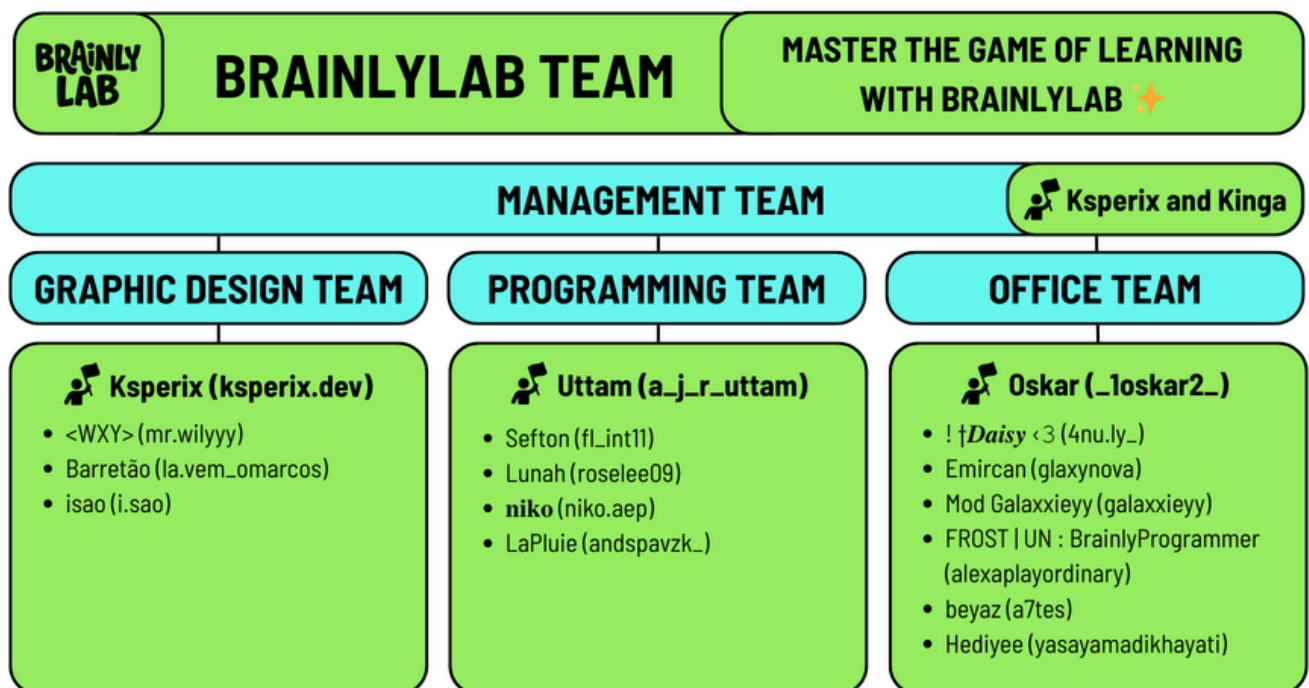

Redesigned the welcome screen for new users.

Added pings and notifications to improve communication.

BRAINLY LAB

In February, the BrainlyLab project entered a phase of intensive development, moving from concept to real organisational and technical activities. The team working on BrainlyLab now numbers 16 people, which clearly shows the scale of commitment and ambition associated with this project. Due to its growing importance, the consolidated report devotes more space to promoting BrainlyLab and presenting the directions for its further development.

EVERY LESSON MOVES YOU FORWARD.

MODERATORS & ADMINS

BRAINLYHQ TEAM - FEBRUARY

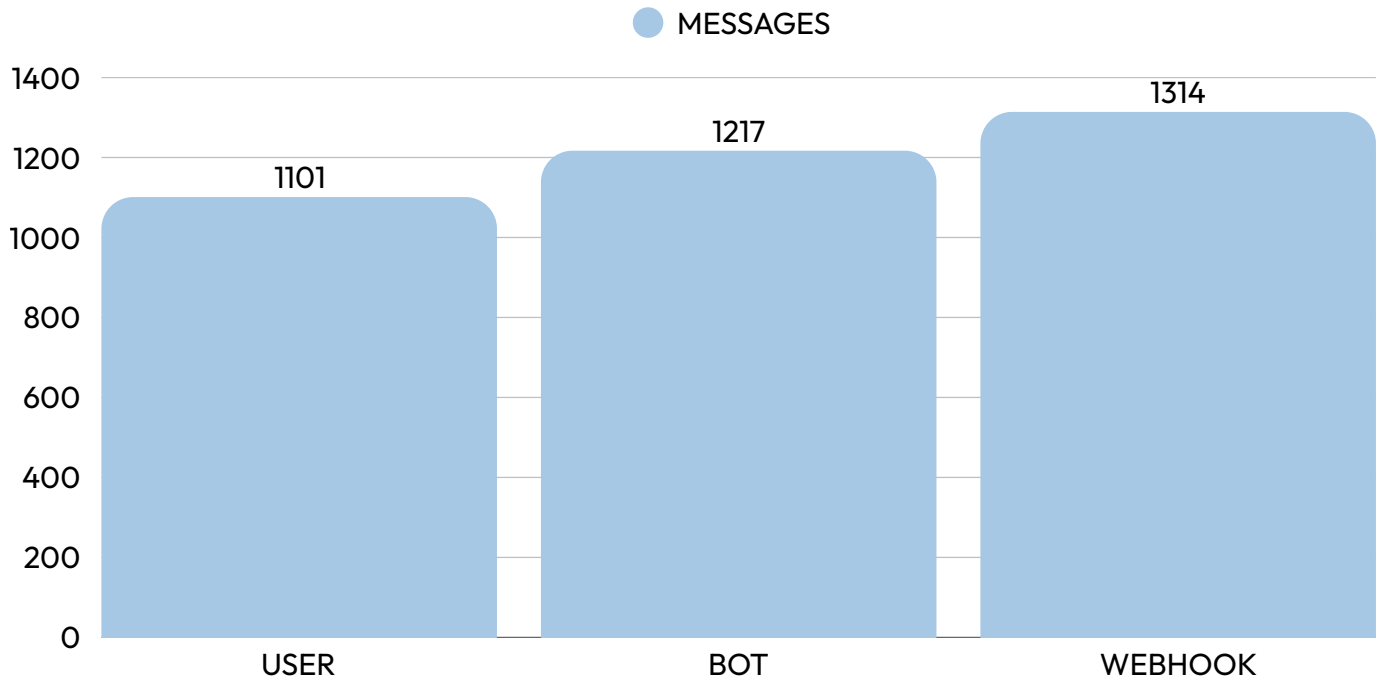

In February, a change was introduced in the way the number of people in the team is counted so that the statistics better reflect the actual staffing situation. Currently, each person is counted only according to their highest role - this means that administrators and board members, despite having moderator privileges, are not additionally included in the pool of moderators. At the moment, the team consists of 12 people. Compared to the previous month, the number of moderators has decreased by two.

OVERALL REPORT

This report concludes a month of steady organizational progress within Brainly HQ. In February, the server recorded a total of 3,632 messages, including 1,101 user messages, 1,217 bot messages, and 1,314 webhook messages, with no images, videos, or file uploads. A slight but natural decrease in overall message volume was observed, primarily resulting from a temporary bot outage that limited automated activity for part of the month.

From a structural standpoint, the team remained stable and clearly defined, consisting of 12 core members: 4 moderators, 4 administrators, and 4 members of management. Each individual is counted according to their highest role, ensuring accurate and transparent statistics. Additionally, improvements to the welcome experience - such as a revised welcome screen and structured pings - helped maintain clarity and accessibility for new members joining the server.

Looking forward, the focus is on strengthening reliability and expanding automation to prevent similar disruptions in the future. Planned development directions include further enhancements to bots, improved system stability, and better integration of automated tools to support moderation and engagement. These steps reinforce a clear path toward a more resilient, efficient, and scalable community ecosystem.
